

## THE OPPORTUNITY

# Shipping disruption is mispriced risk

Seaborne chokepoints move equities and supply chains — yet the risk is asserted, not tested.

## CHOKEPOINT SHARE OF GLOBAL TRADE

(illustrative · public sources)

Share of world trade / seaborne-oil flows by volume.

EIA · IMF · World Bank · UNCTAD — illustrative · public sources.

## RECENT REAL DISRUPTIONS

~90%

**Suez container  
traffic drop, 2024**

Red Sea / Houthi crisis

38 → 18

**Panama daily  
transits, drought**

2023-24 low Gatun Lake

6 days

**Ever Given  
canal blockage**

~400 ships queued, 2021

illustrative · public sources (IMF / World Bank / gCaptain)

## THE GAP

- ▶ Chokepoint shocks move shipping equities and physical supply chains — a load-bearing macro input.
- ▶ Yet most 'risk numbers' are asserted, never tested against realized P&L.
- ▶ Ship Tracker closes that gap: fuses real disruption signals with coverage-tested VaR / ES on realized P&L.
