

## HOW WE KNOW IT'S REAL

# Rigor, Honesty & the Research Engine

Two validators scored on real market data; a test suite with no live-network leaks; an idea panel that compounds the platform.

**EVAL SURFACE — 20 VALIDATORS****2****on REAL market data**

A 56-agent multi-persona idea panel that compounds the platform → recs R267-R279.

**THE HONESTY DISCIPLINE**

- ▶ “Real” means scored against realized P&L — VaR & ES coverage tested on the live 5-yr cache (1,292 days × 6 shipping equities).
- ▶ The other 18 validators walk forward on structural inputs: rigorous and deterministic, but not market-real — and we say so explicitly.
- ▶ Nothing synthetic is ever shown as real. Every feed carries a data-quality / realness stamp; modeled overlays are labelled, never passed off as live.
- ▶ A no-cache CI run reports the 2 real validators as “not evaluated” (vacuously healthy) rather than inventing a number.
