

COMPOSITE SIGNAL

The Shipping Stress Index

One gauge of global shipping stress, decomposed into six prominence-weighted components.

COMPOSITE READING

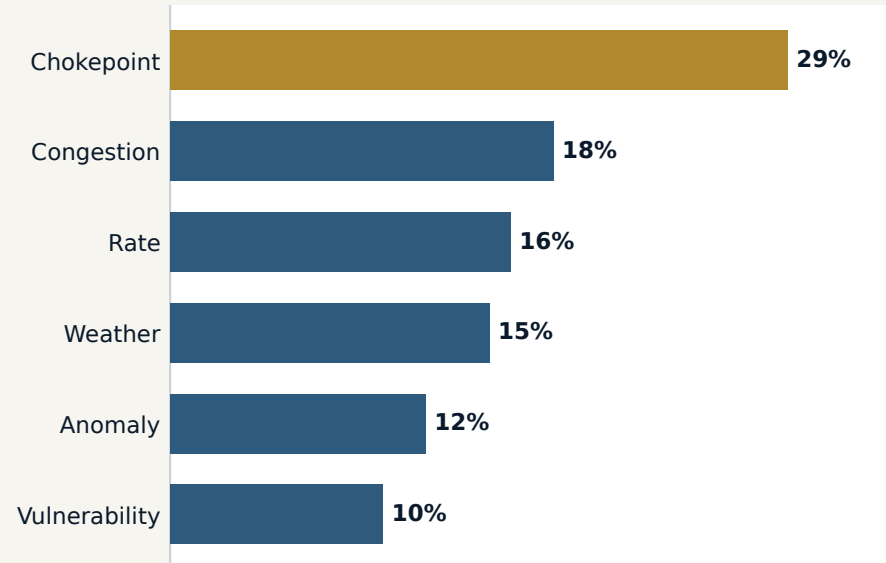

SSI — illustrative

Low 0-40 Elevated 40-70 Critical 70-100

Gauge value illustrative · public sources

Component weights

Chokepoint is the #1 weight (~0.29). Six weights sum to 100%.

HOW TO READ IT

- ▶ 0-100 composite; higher = more shipping stress.
- ▶ Chokepoint transit risk is the #1 weight (~0.29).
- ▶ Six components reconcile EXACTLY to the headline SSI.

REAL + MODELED INPUTS

Real: IMF PortWatch chokepoint transits, FRED macro (BDI / Brent / VIX), equity tape.
Modeled: congestion, weather, anomaly, vulnerability — each labelled real vs modeled.
