

SUMMARY

Why Ship Tracker

Maritime disruption fused with coverage-tested portfolio risk — under an explicit real-vs-modeled discipline.

honesty discipline

THE THESIS

- ▶ Real data end-to-end — IMF PortWatch transits, equity tape & macro feeds.
- ▶ The only shipping-risk platform whose VaR/ES is coverage-tested vs realized P&L.
- ▶ Chokepoints driven by real transit: Suez & Panama by live precedence (R267).
- ▶ Honesty discipline — every feed stamped real vs modeled; nothing faked as real.
- ▶ A self-compounding research engine — 56-agent panel → vetted, shipped recs.

RESEARCH ENGINE

A multi-persona idea panel compounds the backlog: every cycle adds net-new, real-data-testable ideas — then dedups, scores, ships.
